

### Universal Quick-Attach Equipment Only

**Tools Required:** Tape Measure

**Affected Attachments:** Grapples, Pallet Forks, Snow Equipment, & Post-Hole Diggers

The unique design of our front-end loader equipment ensures a snug fit with most Universal Quick-Attach loader arms. Our addition of "ears" to the mounting plate reduces the amount of possible torque and twisting with specific attachments, thus improving the attachment's longevity, and protecting your tractor from long term damage. To guarantee our front-end equipment will hitch to your tractor's Universal Quick-Attach loader arms, please measure your arms' overall width by following the simple directions below.

#### **Measurement Instruction:**

1. Measure the width from the farthest outside points of your front loader arms.

2. If your loader width exceeds 45", please contact us before placing your order to discuss your options for customizing the equipment to accommodate your machine. (Certain redesign up charges may apply.)

**Front End Loader – Customer Measurement Instructions**

- 3. All our Universal Quick-Attach front-end equipment will fit loader widths inside 45" from the farthest outside points.
